

Your safety is our goal

**SAFE
GOAL**

SafeGoal – the only soccer goal in the world with a soft shell

SafeGoal is a revolutionary product that prevents and reduces soccer goal related injuries while retaining flexibility, stability, strength and durability.

Developed by engineers and tested at the prestigious Institute of Biomechanics in Spain, the Safegoal system reduces the risk of injuries by an incredible 44%.

The patented SafeGoal system keeps standard ball bounce and meets all official regulations made by FIFA, US FUTSAL, NFHS and NCAA.

Foam rubber layer

Provides shock absorption and harm reduction. Made from hydrophobic material and does not take up water.

Aluminium frame

Rib-reinforced profile provides maximum stability.

Foam rubber

Ensures stable position of net hooks and prevents injuries to fingers.

Net clips

Made from high-impact plastic, providing fast and easy installation while keeping the net strongly connected.

Elastic PVC coating

Shields from environmental factors and reduces impact against the post by 44%. The layer is protective against UV rays and extreme temperatures from -40F to +176F.

SafeGoal meets all official regulations made by FIFA, US FUTSAL, NFHS and FNCAA.

"Injuries are common in sport and throughout my career I have witnessed many players end their career because of an injury.

My friend and former teammate hit the goal post as goalie and almost ended his career due to a neck injury. Today he plays at the top level in the world and represented the men's national team in Euro 2021. This situation could have been avoided with SafeGoal.

Finding ways to make soccer safer for the players, no matter their age or playing level, is a great achievement. If every kid feels safer on the soccer field, there will be many more future bright stars and healthy athletes among us.

Play safe with SafeGoal."
